

SULLIVAN-PALATEK SP13 SERIES

Takes Compressed Air to the Next Level

Dependable by Design

We are thrilled to unveil a game-changing leap in compressed air technology with the all-new Sullivan-Palatek SP13 series. The SP13 series has undergone a significant transformation, blending reliability and power with a host of enhancements that set a new standard in the industry.

Key Design Enhancements:

Heartbeat of the Package: With the new 130mm airend and package design surpassing DOE standards adopted by eco-friendly states in 2022 and expected federal adoption in 2025. Proudly made in the USA, it reduces energy consumption, increases capacity, and ensures durability. Precision machining and efficient rotor profile, along with tight tolerances, maximize efficiency, making it an ideal, sustainable solution for various industrial needs.

Footprint: The SP13 series now boasts a sleek redesign to optimize its footprint without sacrificing power. Its compact form allows for seamless integration into any workspace, offering greater flexibility in your day-to-day operations.

Powerhouse: Thanks to innovative noise reduction technologies, the SP13 series operates at impressively lower decibel levels. Now, experience the power you need with a significantly quieter footprint, fostering a more comfortable and productive working environment.

Intuitive Control Panel: A redesigned control interface ensures seamless operation. The user-friendly panel grants easy access to vital information, making adjustments and monitoring a breeze. Efficiency has never been this intuitive.

Enhanced Cooling System: The SP13 series now features a state-of-the-art cooling system, ensuring optimal temperature regulation even in high-demand environments. This advancement guarantees prolonged service life and unrivaled performance under any conditions.

Efficiency Redefined: With meticulously engineered components and advanced technology, the SP13 series achieves a new level of energy efficiency. This translates to reduced energy costs, contributing to a more sustainable and cost-effective operation.

Customer-Centric Innovations: Our commitment to customer satisfaction is at the core of this redesign. Feedback from our loyal customers played an instrumental role in shaping these improvements, and we are confident that the SP13 series will exceed your expectations.

Why Upgrade? For those seeking uncompromising power, efficiency, and reliability in compressed air systems, the Sullivan-Palatek SP13 series stands as the definitive choice. Whether you're in manufacturing, construction, or any industry that demands top-tier air compression, this series will redefine your expectations.

Experience the Future Today: Elevate your customer operations and lead the way towards a more efficient, sustainable, and powerful future. Let your customers experience the future of compressed air technology with the Sullivan-Palatek SP13 series.
